

Says

What have we heard them say?
What can we imagine them saying?

The latin root of agriculture is agri,or"field,"plus cultura,"cultivation," cultivating a piece of land,or planting and growing food plants on it, is largely what agriculture means.

Agricuture encompasses crop and livestock production ,aquaculture,fisheries and forestry for food and non-food products.

Today,small farms produce about a thirdof the world's food,but large farms are prevalent.

Modern agronomy,plant breeding,agrochemicals such as pesticides and fertilizers,and technological developments have sharply increased crop yields, but also contributed to ecological and environmental damage.

Environmental issues include contributions to climate change,depletion of aquifers,deforestation , antibiotic resistance, and other agricultural pollution.

No,it is impossible to imagine a world without agriculture. Agricuture satisfies the basic need for food for millions of people and live stocks.it provides raw materials for agrobased industries.export of agricultural produces help in the development of country's economy.

Agricuture is a primary activity. it includes growing crops ,fruits,vegetables, flowers,and the reasing of livestock. in the world,50 percent of people are engaged in agricutured activity.

Agricuture is the art and science of cultivating the soil,growing crops and raising livestock.

Agricuture is the cultivation of plants,animals,and some other organisms,such as fungi,for the production of food,fibre,fuel,and medicines used by society.

The origins of agriculture occured from about 10000years again certain suitable regions,known as"core areas"or"nuclear zones".

Thinks

What are their wants, needs, hopes, and dreams?
What other thoughts might influence their behavior?

WANTS: Supporting livelihoods through food,habitat,and jobs; providing raw materials for food and other products;and building strong economies through trade.

NEEDS: SOURCE OF FOOD: There is always a constant need for a supply of food,therefore,there is a need for agriculture and a need for less dependency on the agriculture sector for the economy.

HOPE: Protection of EV farmers and the agricultural sector through policy on market intervention , trade measures,legislations,and monitoring the market.

DREAMS: Anytime of the year we are harvesting and food insecurity we are mitigating with no rains we are irrigating with many destructors, our crops weare housing so fast, our produce we are reaping and our economy is twinning it is in my dream agriculture.

The factors influencing agricuture are climate,soil type ,irrigation,technology,and population density

Climate has as significant impact on the soil's composition and its vrious types and levels of fertility.

for instance ,temperature,precipitation,wind,light, humidity,and frost are the most influential climatic factors on agricutureal productivity.

Physical factors affecting agricuture in india mainly include the climate,soil,terrain,and topographical location .

INDIA'S AGRICULTURE CROPE PRODUCTION

Seek to understand the behaviour or individual decision - makers ,usually the farmers or land managers directly responsible for the land.

The goal is to improve their working conditions and productivity while avoiding production lossess due to bad climate conditions.

FEARS: The fear of forms is called FUNDOPHOBIA . this phobia usually arises as a results of unpleasent,experiences while on the farm.

FRUSTRATION; Erosinof soil by heavyrain ,floods,insufficient vegetation cover etc.,reduces farm productivity.

financial pressures; workload, isolation and family relationships.

Pollutants from farming include sediments, nutrients ,pathogens,pesticides,metals,and salts.animal agricuture has an out sized impact on pollutants that enter the environment.

Pollutants from agricuture greatly affect water quality and can be found in lakes, rivers, wetlands, estuaries, and groundwater.

Emotions like frustration and boredom can lower motivation and,thus,lower the chance that we will act.

Behavior is different from emotions but is very strongly influenced by them.

Seed is a product of fertilisation and it consists of embryo. the seeds germinate to give rise to the rooy andshoot of the plants.

Due to lack of water , climate changes and personal problems are affecting the agricuture.

We can see that in future eventually many formers gonna give up.

Does

What behavior have we observed?
What can we imagine them doing?

Feels
